1 / 1 points

1.
You are training a three layer neural network and would like to use backpropagation to compute the gradient of the cost function. In the backpropagation algorithm, one of the steps is to update

$$\Delta_{ij}^{(2)} := \Delta_{ij}^{(2)} + \delta_i^{(3)} * (a^{(2)})_j$$

for every i, j. Which of the following is a correct vectorization of this step?

1 / 1 points

2.
Suppose `Theta1` is a 5x3 matrix, and `Theta2` is a 4x6 matrix. You set `thetaVec = [Theta1(:); Theta2(:)]`. Which of the following correctly recovers `Theta2`?

1 / 1 points

3.

Let $J(\theta) = 3\theta^4 + 4$. Let $\theta = 1$, and $\epsilon = 0.01$. Use the formula $\frac{J(\theta+\epsilon)-J(\theta-\epsilon)}{2\epsilon}$ to numerically compute an approximation to the derivative at $\theta = 1$. What value do you get? (When $\theta = 1$, the true/exact derivative is $\frac{dJ(\theta)}{d\theta} = 12$.)

---

0 / 1 points

4.

Which of the following statements are true? Check all that apply.
